Xuan Kan

xuan.kan@emory.edu • kanxuan.live

Education

- **Emory University** — **Altanta, US**
  PhD of Computer Science and Informatics at CS Department — *Sept.2019–Now*
  Advisor: Prof. Carl Yang and Prof. Ying Guo
- **Tongji University** — **Shanghai, China**
  Bachelor of Software Engineering in School of Software Engineering — *Sept.2014–Jul.2018*
- **GPA:** 4.55/5.0 (Tongji), 3.97/4.0(Emory)
- **Main Courses:** Artificial Intelligence, Machine Learning, Data Mining, Graph Mining, Information Retrieval, Advanced Database, Numerical Analysis

Experience

PhD Software Engineer Intern — **Seattle, US**
Meta — *May.2022-August.2022*
Interned in Ads Core ML Team for Signal Loss problem. My project aims to build Multi-Task Multi-Label (MTML) Hypergraph Neural Network (HGNN).

- Hive table generation from Ads data. Since the used data source will generate 3 billion records daily, optimized the query process for the hive table generation with downsampling and parallelization.
- TorchTec model implementation. Mimicked the previous MTML model implemented by caffe2, implemented our HGNN version on TorchRec, and continued optimizing my TorchRec model until a competitive performance was obtained.
- New task design. With the new data and model, defined 9 tasks for the HGNN model and designed experiments to find the best task combo.
- Performance evaluation. Compared with the single task HGNN, the MTML HGNN's training NE with the best task combo decreases from 0.5549 to 0.554 significantly, approximately 0.16% improvement, which unleashes the power of MTML.
- Enlarge the HGNN model. Added 20 kinds of edges and 10 kinds of nodes to the hypergraph.

Research Intern — **Beijing, China**
SenseTime — *Feb.2019-July.2019*
Interned in SenseTime Smart City Group. My project aims to accelerate the neural network inference time in mobile devices with Neural Architecture Search (NAS) for stereo matching.

- Implemented a NAS framework based on the paper *FBNet: Hardware-Aware Efficient ConvNet Design via Differentiable Neural Architecture Search*.
- Designed the search space for MobileNetV2.
- Measured the running time of different modules in mobile devices.
- Leveraged Neural Architecture Search to improve efficiency and accelerate the inference of neural networks on face anti-spoofing and stereo matching.

Research Intern — **Oxford, UK**
University of Oxford — *April 2017-May.2018*
Interned in Cyber Physical Systems Group. Assisted and finished 3 projects, each publishing a related paper.

- Autonomous Learning for Face Recognition in the Wild: proposed a method using Wi-Fi appearance

information to label images automatically in wild and implemented a pipeline framework to label capturing images and fine-tune models.

- Real-time Liquids Intake Monitoring: utilized a SVM model to detect actions for drinking water in Android Wear OS.
- Biometric Verification without Leak: developed an app in Android Wear OS for collecting user motion data and implemented a method like counting CPU time slices to calculate the energy and CPU consumption of watch apps.

Honor and Awards

- 2018 Outstanding Graduates for Tongji University (Top 5%)
- 2017 National Scholarship (Top 1.6%)

- 2017 American Mathematical Contest in Modeling (S prize)
- 2017 Tongji University Programming Competition (Second Prize)
- 2017 National Undergraduate Innovation Programs
- 2016 China Undergraduate Mathematical Contest in Modeling (First Prize in Shanghai & Second Prize in National Level)
- 2016 Android Entrepreneurship Student Challenge by Google Inc.(Sliver Prize)
- 2015 & 2016 Tongji University Scholarship for Outstanding Students (Twice)

Skills

- **Programming:** Adept in Python, PyTorch, C++, Java, C, familiar with Tensorflow, JavaScript
- **Platforms:** Linux, MacOS, Anaconda
